

On the DVD

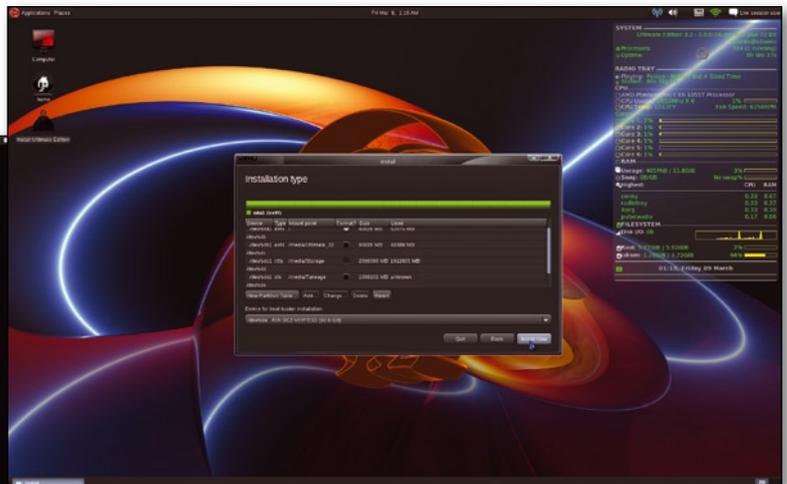

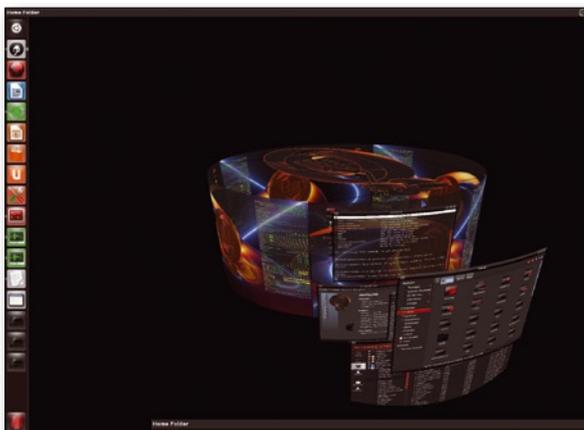

Ultimate Edition 3.2

This issue's DVD comes with the latest release of the Ultimate Edition distribution [1][2].

Ultimate Edition 3.2, which is based on Ubuntu 11.10 "Oneiric Ocelot," offers a wide range of desktop options – GNOME 3, GNOME Classic, GNOME Fallback, Unity, Unity 2D, and XMBC – all available at the login screen.

Other Ultimate features include a custom desktop and theme with 3D effects, support for a variety of networking options, including WiFi and Bluetooth, and integration of many extra applications and package repositories. The project's goal is to create an easy and complete Linux experience without the need to install additional packages following the initial setup.
